## Abstracts

The global High Recyclability Mono Material Flexible Packaging market size is predicted to grow from US\$ 1975 million in 2025 to US\$ 3381 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

In 2024, global high recyclability mono material flexible packaging production reached approximately 807,368 ton, with an average global market price of around USD 2,500 per ton. A factory gross profit of USD 625 per ton with 25% gross margin. A single line full machine capacity production is around 10,000 ton per line per year. downstream demand is concentrated in food & beverage, personal care and pharmaceutical. A global chips brand switches its snack pouch from a multi-layer PET/Al/PE laminate to mono-PE recyclable pouch: improves recyclability claims and reduces end-of-life sorting issues. High recyclability mono-material flexible packaging is food-safe, performance-driven packaging made from a single type of polymer (like PE or PP) for all layers, eliminating mixed materials (foil, different plastics) that hinder recycling, allowing it to be processed efficiently in standard recycling streams, thus supporting the circular economy and reducing landfill waste. It offers barrier properties (like moisture/oxygen protection) and printability but is designed for easy sorting and reprocessing into new materials.

United States market for High Recyclability Mono Material Flexible Packaging is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
