High-resolution audio processing SoC refers to a specialized system-on-chip designed for high-fidelity audio signal processing. It typically integrates audio DSP, DAC/ADC interfaces, digital audio interfaces (such as I2S, PCM, DSD), clock management, power management, and control units. The chip supports audio processing and decoding at 24bit/96kHz, 24bit/192kHz or higher sampling rates, and is widely used in high-end headphones, audio players, smartphones, automotive audio systems, smart speakers, and professional audio equipment. It is the core chip for high-resolution audio playback and processing.

Upstream mainly includes wafer manufacturing, semiconductor IP cores (audio DSP IP, interface IP), EDA software, packaging and testing, and analog/mixed-signal design technologies. The midstream consists of high-resolution audio SoC design companies and IDMs. Downstream applications include TWS earphones, high-end wired headphones, portable audio players (DAP), smartphones, automotive audio systems, smart speakers, and professional audio equipment. Among these, consumer electronics represents the largest application market, while automotive audio and professional audio are faster-growing segments.
