The global High-Side Driver market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A high-side driver is a circuit configuration used on electronic circuits to drive a switch element between a power supply and a load.

The switch element to be driven is called a high-side switch, and the high-side switch is controlled to turn the power supply on and off and to supply or disconnect current to the load. In contrast, a driver that drives the switch element placed between the load and ground is called a low-side driver.

To supply current to various loads, high-side drivers and low-side drivers have unique characteristics in their respective circuits.
