The global High Specific Gravity Alloy market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

High density alloy (also called high-density alloy) is a kind of alloy based on tungsten (with tungsten content of 85~99%) and added with a small amount of Ni, Cu, Fe, Co, Mo, Cr and other elements. High specific gravity tungsten alloy has a series of excellent physical and mechanical properties, mainly embodied in high density, high tensile strength, good ductility, good electrical properties and thermal conductivity. Tungsten alloys are widely used in military industry, nuclear industry, machinery industry, aerospace industry, electric power industry, medical shielding, sports goods and other industries due to their high specific gravity, high hardness, excellent radiation resistance, electrical conductivity and thermal conductivity, small thermal expansion coefficient, high elastic modulus, corrosion resistance and good processing performance.

United States market for High Specific Gravity Alloy is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
