High-speed 3D laser profilometer is a measuring device that uses laser scanning technology to quickly obtain 3D profile data of an object surface. By projecting a laser beam onto the surface of the object being measured and combining it with a high-precision sensor and computing system, it can capture the geometric shape, size, texture and other information of the object surface in real time. It is widely used in quality control, industrial inspection, reverse engineering and precision manufacturing. Its advantages are high precision, high speed and non-contact measurement.
