High-speed 3D line laser profile sensors are high-precision measuring devices that use laser beams to scan the surface of an object to obtain three-dimensional profile information. This sensor usually captures the reflected laser spot in real time by emitting laser lines and combining it with a high-speed camera or detector to calculate the height, shape and other geometric features of the object's surface. High-speed 3D line laser profile sensors are widely used in industrial automation, robot vision, quality inspection and reverse engineering. They can achieve fast, efficient and accurate three-dimensional measurement, helping to improve production efficiency and product quality.
