The high-speed fiber stretcher is an optical device used to achieve rapid stretching and compression of optical fibers. It usually consists of a drive system and a clamping device for fiber fixation.

The high-speed fiber stretcher takes advantage of the material properties of optical fibers that, when stretched or compressed, cause frequency shifts in the propagating modes in the fiber. By applying appropriate mechanical forces, the optical fiber can be stretched or compressed in a linear direction, thereby changing the transmission properties in the fiber.
