A High-Speed Flying Probe Tester is an advanced testing system used to evaluate the functionality, electrical performance, and integrity of printed circuit boards (PCBs) without the need for test fixtures. This tester employs multiple high-precision probes that move rapidly across the PCB to test individual points, making it ideal for prototype and low-volume production testing. Key features include high testing speed, adaptability to various PCB designs, minimal setup time, and the ability to perform in-circuit, open/short, and component-level testing. Its non-contact and fixtureless design enhances flexibility and reduces costs compared to traditional testing methods. High-Speed Flying Probe Testers are widely used in electronics manufacturing for quality control, fault detection, and ensuring product reliability in industries such as telecommunications, automotive, and consumer electronics.
