The steam turbine high-speed gearbox is an important part of the steam turbine transmission system. It is used to reduce the rotation speed of the high-speed rotating rotor of the turbine and drive the output shaft to rotate the generator or other loads. The gearbox usually includes a high-speed shaft, an intermediate shaft, a low-speed output shaft and corresponding gears. The speed reduction and power output are achieved through the transmission and rotation of the gears. High-speed gearboxes typically use precision manufacturing techniques and high-quality materials to ensure their reliability and long life.

The global High Speed Gearboxes market size is projected to grow from US\$ 227 million in 2024 to US\$ 405 million in 2030; it is expected to grow at a CAGR of 10.1% from 2024 to 2030.
