High-speed passive copper cable is a connection cable used for high-speed short-distance data transmission. It is mainly composed of high-purity copper conductors and shielding materials, and realizes high-speed interconnection between devices through physical signal transmission. It is characterized by no need for additional power supply or electronic components to amplify the signal, and has the advantages of low power consumption, low latency, high reliability and low cost. The transmission distance is generally within 3 to 5 meters. High-speed passive copper cable is widely used in scenarios such as data centers, server interconnection, high-performance computing (HPC), and network equipment connection. It is an important solution to meet the needs of short-distance high bandwidth, especially in networks with speeds of 100G and above.
