High-strength circular link chains are often used in mining applications because they can withstand heavy loads and harsh environmental conditions. These chains are usually made of alloy steel and have a circular cross-section, which allows the effective transmission of tension and bending force. In the mining industry, high-strength circular

chains are usually used in conveying systems, which are responsible for moving a large amount of material from one location to another. These chains are also used for lifting systems to lift heavy objects from underground mines. The high strength of these chains makes them very suitable for mining applications with extremely heavy loads and challenging conditions.
