## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Polybutylene adipate terephthalate (PBAT) is a biodegradable and compostable polymer that is known for its flexibility, toughness, and good processability. High-strength PBAT is an enhanced version of standard PBAT, designed to offer improved mechanical properties such as tensile strength, elongation at break, and impact resistance. This makes it suitable for applications that require both biodegradability and higher performance. By improving the polymer's strength, it becomes more versatile for a wider range of applications, including those that traditionally rely on conventional, non-biodegradable plastics.

The global High-strength PBAT market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
