The global High Temperature Antioxidant market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

High temperature antioxidants are chemicals used to resist oxidation reactions in high-temperature environments. Under high temperature conditions, the oxidation reaction will accelerate, leading to material aging, corrosion, and performance degradation. High temperature antioxidants can slow down or prevent the occurrence of these oxidation reactions by capturing free radicals, stabilizing oxides, and enhancing the heat resistance of materials, thereby extending the service life of materials and maintaining their performance stability. High temperature antioxidant is an efficient high temperature antioxidant with a wide range of applications, often used in various mid to high grade oil products. This product can be used in internal combustion engine oil, turbine oil, heat transfer oil, hydraulic oil, lubricating grease, and fuel oil. In addition, it can also be used in rubber products to prevent thermal oxidation and elastic bending aging of rubber.

United States market for High Temperature Antioxidant is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for High Temperature Antioxidant is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for High Temperature Antioxidant is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
