The global High Temperature Drilling Starch market size is predicted to grow from US\$ 39.41 million in 2025 to US\$ 49.67 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

High temperature drilling starch refers to a starch-based product used as a drilling fluid additive in high-temperature drilling operations.

The market for high temperature drilling starch is driven by the demand for efficient and stable drilling fluids in high-temperature drilling environments. High temperature drilling starch acts as a viscosifier and stabilizer in drilling fluids, helping to maintain the stability of drilling operations under elevated temperatures. It provides advantages like thermal stability, excellent water retention, and shear-thinning behavior. The market growth is influenced by the continuous need for efficient and reliable drilling fluid additives for high-temperature applications. The demand for high-quality and performance-oriented high temperature drilling starch contributes to the growth of this market.
