High-temperature foaming agent can be decomposed only at high temperature, and the temperature is usually 200 degrees Celsius and above. Under the action of high temperature, this type of foaming agent can decompose itself to generate carbon dioxide or nitrogen, which makes the foaming agent to be foamed. A chemical foaming agent filled with air bubbles in the middle of a substance. Usually includes AC foaming agent and H foaming agent. Foaming agent AC is widely used in the foaming of polymers, as well as in the foaming of polyethylene, polystyrene, ABS resin and other plastics. With this foaming agent, a uniform and fine cell structure can be obtained, and the product has the superior properties of comfortable hand feeling, good resilience and strong leather feeling. It can be used to make tool handles, furniture, auto parts, closed-cell leather, floors, seals and shoe soles, etc. Foaming agent H is widely used in rubber foaming and plasticized PVC lamination, blow molding and foaming.
