High-temperature thermally conductive silicone grease is a type of lubricant that is specifically designed to withstand high temperatures while also having excellent thermal conductivity properties. It is commonly used in various industries, including electronics, automotive, aerospace, and power generation. This silicone grease is formulated with a base of silicone oil or silicone fluid and mixed with thermally conductive fillers such as metal oxides or ceramics. The combination of these ingredients provides the grease

with high thermal conductivity, allowing it to effectively transfer heat between surfaces. The high-temperature resistance of this silicone grease enables it to withstand extreme temperatures without breaking down or losing its effectiveness. It can typically withstand temperatures ranging from -50°C to 200°C or even higher, depending on the specific formulation. The thermally conductive properties of this grease make it suitable for applications where efficient heat dissipation is required. It is commonly used in electronic components, such as heat sinks, power modules, LED lighting, and computer processors, to enhance heat transfer and prevent overheating.
