The defoaming machine is also called 'defoaming machine' or 'defoaming machine'. Maintain a high-stress work environment. If the chip containing air bubbles is put into the chamber of the defoaming machine at this time, the bubbles on the surface of the chip contain residual air, and at this time interact with the high-pressure environment inside the defoaming machine to form a pressure difference, so as to achieve the purpose of removing the air bubbles on the surface of the chip. The effect of extrusion

to edge discharge ensures the safety and stability of chip packaging.
