High Temperature Wire and Cable Jackets refer to the outer protective layers of electrical wires and cables that are specifically designed to withstand elevated temperatures. These jackets provide thermal insulation and protect the underlying conductors and insulating materials from heat-related damage. High-temperature wire and cable jackets are commonly used in industrial, automotive, aerospace, and other applications where exposure to high temperatures is a concern.

Ongoing research and development efforts focus on creating new materials or enhancing existing ones to withstand even higher temperatures. This includes the development of advanced ceramics, high-temperature thermoplastics, and nanomaterials with improved heat resistance.
