The global High Thermally Conductive Polyimide Film market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

These are polyimide films engineered to possess superior thermal conductivity compared to standard polyimide films. Standard polyimides are excellent electrical insulators but have inherently low thermal conductivity. In contrast, high thermally conductive versions achieve significantly improved heat transfer capabilities while retaining the valuable properties of polyimides, such as:

High-Temperature Resistance: Withstands extreme temperatures, making them ideal for hot environments.

Excellent Dielectric Properties: Provides electrical insulation for electronic components.

Mechanical Strength: Offers good durability and dimensional stability.

United States market for High Thermally Conductive Polyimide Film is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
