Abstracts

The global High-throughput Microwave Digestion System market size is predicted to grow from US$ 789 million in 2025 to US$ 1178 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

The High-throughput Microwave Digestion System is an advanced sample preparation equipment that combines microwave heating technology with high-pressure sealed reaction vessels to achieve rapid digestion of batch samples. Its core advantage lies in the parallel processing design (typically handling 10-40 samples per batch) and intelligent temperature-pressure control modules, which reduce the traditional hot plate acid digestion process from several hours to 30-60 minutes while preventing volatile element loss. This meets the efficiency and data accuracy requirements for high-volume sample processing in modern laboratories across fields such as food testing, environmental monitoring, pharmaceuticals, and materials analysis. The global market size for High-throughput Microwave Digestion Systems in 2024 is approximately US$717 million, with an annual sales volume of about 15,200 units. The projected CAGR for the next five years is 5.8%. The average market price is approximately US$47,200 per unit, with a single production line capacity of 800-1,200 units per year, and the industry's gross margin is generally around 35%.

United States market for High-throughput Microwave Digestion System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for High-throughput Microwave Digestion System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
