Abstracts

The global High Torque Servo Motor Brake market size is predicted to grow from US$ 394 million in 2025 to US$ 738 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

High-torque servo motor brakes are electromagnetic braking devices specifically designed for high-power servo motors and heavy-duty automated equipment. They primarily achieve rapid braking and safe holding of the motor under high inertia through electromagnetic engagement or power-off braking. They are widely used in industrial robots, CNC machine tool spindles, wind power generation yaw systems, port lifting equipment, and large transmission platforms. In 2024, global sales of high-torque servo motor brakes were approximately 310,000 units, with an average unit price of approximately US$1,220 and a single-line annual production capacity of approximately 25,000 units. Upstream companies are mainly concentrated in the manufacturing of high-permeability silicon steel sheets, friction materials, permanent magnet components, and electronic control modules. Downstream companies are distributed among high-performance servo motor manufacturers, heavy equipment manufacturers, robot system integrators, and new energy equipment manufacturers. The industry's average gross profit margin is approximately 30%. In the product cost structure, electromagnetic coils and friction plates account for approximately 40% of the total cost, high-strength housings and mechanical components account for approximately 30%, electronic control modules account for approximately 15%, assembly and quality inspection account for approximately 10%, and transportation and management costs account for approximately 5%. This report studies high-torque servo motor brakes with a torque greater than 100 N·m. Some high-end models integrate temperature sensing and wear detection modules, enabling intelligent monitoring and preventive maintenance, and meeting the safety and reliability requirements under high-precision
