High Vacuum Dust Collector is an industrial-grade dust removal equipment. It is specially used to collect and purify dry, oil-free smoke and dust. It is widely used in mechanical processing processes such as welding, cutting, and grinding, as well as in the pharmaceutical industry, local cleaning and other industrial environments. Under the action of high negative pressure, welding fumes and dust enter the interior of the cavity through the suction hose, and the cylindrical dust removal cylinder is used to form a rotating airflow. Large particles of dust or welding slag settle along the cylinder wall to the ash bucket under the action of centrifugal force. , the fine dust enters the filter cartridge area with the air flow, and the fine dust remains on the surface of the filter cartridge. The clean air flows into the fan through the inner wall of the filter cartridge, and then is discharged into the room.

The global High Vacuum Dust Collector market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
