The global High Viscosity Polyalphaolefins market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

High viscosity polyalphaolefins (PAOs) are synthetic base oils with high viscosity indexes and excellent thermal stability. They are widely used in lubricant formulations, especially in applications where high temperature and heavy load conditions are present. High viscosity PAOs offer superior film strength and lubrication properties, making them suitable for use in gear oils, hydraulic fluids, and industrial lubricants.

The market for high viscosity polyalphaolefins is growing steadily, driven by the increasing demand for high-performance lubricants in industries such as automotive, manufacturing, and construction. As equipment manufacturers and end-users seek lubricants that can withstand extreme operating conditions and provide long-lasting protection, the demand for high viscosity PAOs is expected to continue rising. Additionally, advancements in formulation technology and environmental regulations favoring synthetic lubricants contribute to market growth.
