The global High-Voltage Coil market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A high voltage coil is an electromagnetic coil designed to operate at high voltages, typically in electrical systems where the coil generates or responds to high voltage currents and magnetic fields. Capable of operating at voltages up to hundreds of kilovolts (kV), these coils are typically made up of multiple layers of tightly wound conductive wire with insulation between the layers to prevent arcing or breakdown between the wires. This high voltage coil is an essential component in equipment such as transformers, motors, generators, ignition systems, and other high voltage electrical equipment.

United States market for High-Voltage Coil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
