The global High Voltage Immersed Electrode Boiler market size is predicted to grow from US\$ 150 million in 2025 to US\$ 241 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

The electrodes of the high voltage power supply are directly immersed in the boiler water for heating, in Immersed Electrode Boiler. High Voltage Immersed Electrode Steam Boilers utilize the conductive and resistive properties of water to carry electric current and generate steam. An A.C. current flows from an electrode to one phase to the ground using the water as the conductor.

Electrode boilers have the advantages of high safety, high efficiency and high reliability. Under the global background of 'dual carbon goals', high-voltage electrode boilers have the advantages of small size, high power, high efficiency and energy saving, low maintenance workload, no pollution and optimal comprehensive investment. They are used in nuclear power plants, flexible peak regulation, urban heating, industrial steam and other fields, and can meet multiple application requirements at the same time according to different usage conditions.

Global key players of high voltage immersed electrode boiler include Zander & Ingestr?m, Elpanneteknik, PARAT Halvorsen AS, ACME Engineering Products, Hangzhou Huayuan Frontline, etc. The top five players hold a share over 64%.

The Asia-Pacific region is the largest market, accounting for about 34% of the market share. Benefiting from the 'coal to electricity' policy, industrial expansion and clean energy transformation, China's market demand is growing rapidly. Industrial automation and energy efficiency demands in Japan, South Korea and India are also driving market

development.

The trend of industrial electrification, grid peak load demand and EPA clean energy policies in North America are driving market growth.
