Magnetic Reed Switch consists of a pair of ferromagnetic reeds, which overlap at their free ends (contact area) at a very small distance and are hermetically sealed in a glass tube. When in the presence of a magnetic field, the reeds become magnetized to opposite polarity, thus attracting each other and closing contact. Like many other great inventions, reed switches were born at Bell Laboratories, invented there in the mid-1930s by Walter B. Elwood. Today, reed switches are still in common uses. High voltage reed switch products are used for switching high voltage applications in photovoltaic systems, medical, industrial, telecommunications, and (ATE) automated test equipment markets. This report focuses on products whose switching voltage exceeds 600V.

The global High Voltage Magnetic Reed Switch market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
