High-voltage nickel-hydrogen battery is a rechargeable battery that usually uses nickel-hydrogen compound as the positive electrode material, titanium hydride or other metal alloys as the negative electrode material, and uses an alkaline electrolyte of sodium hydroxide or potassium hydroxide. This type of battery provides a relatively high voltage when used in a device and is often used in applications that require high energy density and high power output, such as some power tools, hybrid vehicles, electric vehicles, and drones. High-voltage nickel-metal hydride batteries have higher energy density and are more environmentally friendly than traditional nickel-cadmium batteries because they do not contain toxic cadmium substances.
