The global High Voltage Piezoelectric Stack Actuator market size is predicted to grow from US\$ 720 million in 2025 to US\$ 1141 million in 2032; it is expected to grow at a CAGR of 6.9% from 2026 to 2032.

High voltage piezoelectric stack actuators are constructed with discrete sintered, poled ceramic disks, rings or plates with thin metal leaf electrodes interlaced between the ceramics. The device is bonded together with a high quality adhesive. These stack actuators are often enclosed in metal casing with an appropriate pre stress applied. Other options for these actuators can be casings specially designed to manage the heat generated during operation, or include the possibility of position sensing for the piezoelectric stack actuator.

Discrete stacking offers the widest range of ceramic materials, flexibility in the shape of the ceramic elements, and better control of heat generated during high frequency operation, but voltages of 500 V ? 1000 V usually are needed to operate these actuators.
