The global Highly Effective and Low-Toxic Insecticide market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

High-efficiency, low-toxicity pesticides refer to a class of pesticides that have excellent insecticidal effects and low toxicity. These pesticides usually interact with specific biological processes of pests, causing their death or abnormal growth and development, but are less toxic to non-target organisms and will not cause serious impacts on the ecosystem. High-efficiency, low-toxicity pesticides are widely used in agricultural production, providing a relatively safe and effective option for pest control, while also helping to protect the environment and stabilize the ecological balance.

The emergence of high-efficiency and low-toxic pesticides has balanced the relationship between agricultural production and environmental protection to a certain extent. They can not only effectively control pests on crops and improve yield and quality, but also have low toxicity, reducing adverse effects on non-target organisms and ecosystems. However, although these pesticides are relatively safe, they still need to be used with caution and applied reasonably to avoid potential damage to the ecological environment. Therefore, the scientific and reasonable selection and use of high-efficiency and low-toxic pesticides is one of the important measures to achieve sustainable agricultural development and ecological balance.
