## Abstracts

The global Hip Thrust Belt market size is predicted to grow from US\$ 4.21 million in 2025 to US\$ 7.28 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

In 2024, the global production of barbell hip thrust belts was approximately 150,000 to 250,000 units, with an average selling price of about \$20 per unit and a gross profit margin of about 40%. A single production line had a capacity of approximately 120,000 units per year. The barbell hip thrust belt is an innovative strength training device that replaces traditional barbells for hip thrusts, glute bridges, and other exercises. Its core design consists of a high-strength, wide belt connected to an independent barbell bar (or a dedicated connector) via two adjustable chains or straps. The trainee secures the belt to their hips and pushes their hips upwards against the resistance transmitted through the chains, thereby stimulating the glutes and posterior chain muscles. The upstream supply chain of barbell hip thrust belts mainly includes suppliers of raw materials such as high-strength nylon/leather, metal connectors, and cushioning foam. The midstream is the core manufacturing stage, involving the cutting and sewing of the belt, the assembly of metal buckles and chains, and finished product testing, all completed by professional fitness equipment factories. Downstream, it is ultimately sold to individual fitness enthusiasts, commercial gyms, and professional sports teams through fitness equipment distributors, e-commerce platforms, and brand websites. The demand stems from strength trainers' pursuit of the ultimate training experience and results: on the one hand, it solves the problem of severe hip pain during traditional barbell hip thrusts, which is a strong 'pain point' demand; on the other hand, driven by fitness culture and social media, the pursuit of aesthetic physique and athletes' need to improve their specific performance have jointly promoted the continuous growth of the product market.
