An HL finish is a surface treatment in which fine scratches are applied to the surface of stainless steel products in a certain direction using a belt grinder coated with an abrasive.

It is called HL (hairline) finish because the fine scratches applied to the surface are as fine as a hair. Although HL finish is part of the surface treatment design, the abrasive scratches have a matte effect and the metallic luster is subdued, giving the product a refined, high-quality finish.

In addition to the visual splendor of the HL finish treatment, the surface irregularities created by the polishing process also provide an excellent anti-slip function. Because it combines design and functionality, it is often used in places where people can see or touch it.

HL finish is one of the most common surface treatments for stainless steel products.

The global HL Finish market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
