Human leukocyte antigen (HLA), also known as transplantation antigen, is related to allogeneic tissue and organ transplantation and graft rejection. HLA tissue matching is one of the important factors affecting the survival rate of organ transplantation, hematopoietic stem cell transplantation and the quality of life of the recipient. HLA genes are highly polymorphic and determine the polymorphism of the expressed HLA antigen molecules. Currently, genotyping detection technology is mainly used for HLA typing. Compared with serological and cytological methods, it has higher sensitivity and accuracy and can detect more types.
