Manhole and handhole are two channels in glass lined container. The small reactor is equipped with a hand hole with the largest opening size possible on the cover. It usually includes a mirror that allows hands to enter the reactor without removing the main cover. As long as the diameter or volume of the glass lined inner tank is large enough, manholes will be installed, mostly with glass lined manhole protection ring and glass lined manhole cover. This allows the container to be manufactured integrally without the need for a body flange.

The Hole Covers for Glasslined Equipment market is a specialized segment within the
