The global Hollow Assembled Camshaft market size is predicted to grow from US\$ 1433 million in 2025 to US\$ 1897 million in 2032; it is expected to grow at a CAGR of 4.2% from 2026 to 2032.

The hollow assembled camshaft is made by optimizing the material matching of the cam, hollow shaft body and supporting journal, and then precision machining them separately and assembling them in a certain connection method. The hollow assembled camshaft can realize the arbitrary selection of the camshaft structure and the cam working surface, and can narrow the cam width and reduce the spacing, which shows great superiority in the processing and manufacturing of multi-valve overhead camshafts. At the same time, precision forming technology can be used for the processing of cams with different curvatures (including new negative curvature camshafts), making it possible to manufacture complex and difficult-to-process camshafts, which is conducive to the design and manufacturing of new products.
