Hollow Fiber Filter TFF Modules are devices used for separating, concentrating, and purifying biological and chemical solutions. They consist of semi-permeable hollow fibers, where the solution flows tangentially along the fibers' surfaces while small molecules and solvents pass through the pores, and larger molecules, such as proteins, are retained. This method offers high filtration efficiency with minimal clogging, continuous processing capabilities, and is used in various applications like protein purification, cell harvesting, and wastewater treatment. Hollow fiber filters are valued for their scalability, low shear force, and ease of cleaning.
