Hollow Paddle Dryer is a low-speed stirring dryer with a stirring blade inside the equipment, so that the wet material can fully contact the heat carrier and the hot surface under the agitation of the blade, thereby achieving the purpose of drying. The Hollow Paddle Dryer is mainly composed of two or four hollow blade shafts that mesh with each other, a W-shaped jacket shell, a transmission part and a machine base. The structure is generally horizontal. The hollow shaft is densely arranged with wedge-shaped hollow propeller blades, and the heating medium is usually steam, hot water or thermal oil. During operation, the heating medium is divided into two paths and enters the inner cavity of the jacket shell and the blade shaft respectively, heating the dryer body and the blade shaft at the same time.

The global Hollow Paddle Dryer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
