## Abstracts

The global Hollow Shaft Stepper Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A hollow shaft stepper motor is a type of stepper motor that features a hollow core or shaft in its rotor. Unlike conventional stepper motors, which have a solid rotor shaft, hollow shaft stepper motors have a void or opening in the center of the rotor.

Hollow shaft stepper motors offer a combination of precise motion control, versatile integration options, and the convenience of a hollow core for cable or component routing. Their design makes them well-suited for applications where space optimization, cable management, and accurate positioning are critical factors.
