The holographic display work without the help of producing digital content and support equipment via glass with a coating.

A holographic display is used to create realistic three-dimensional (3D) images. It uses light diffraction to generate a holographic effect. It is used in a variety of sectors as a successful marketing and advertising tool to generate brand awareness and boost sales. Several manufacturers are already developing advanced product variations that can display 3D pictures of aerial maps. They include micro pistons that act similarly to pixels on a computer display, helping to enhance overall image quality. The surge in demand for holographic AR displays for medical applications such as endoscopy and X-ray drives the holographic display market growth during the forecast period. In addition, increase in the usage of holographic displays for advertising and events promotes the holographic display market rapid expansion. All these are the major factors anticipated to drive the market revenue growth in the upcoming years.
