Users can see the three-dimensional images suspended in the holographic cabinet without wearing 3D glasses. It can display both three-dimensional models and three-dimensional movies. Compared with flat displays, holographic displays have stronger visual impact. The holographic cabinet is mainly composed of a cabinet, a beam splitter, a spotlight, and a video playback device. By superimposing the three-dimensional image content on the real scene, the effect of combining the virtual and the real is achieved, which brings the ultimate visual enjoyment to visitors and allows the display content to be presented to the public clearly, completely, and comprehensively.
