Holotomography systems are advanced imaging devices that generate high-resolution, three-dimensional images of transparent or semi-transparent biological samples using label-free, quantitative phase imaging techniques. By capturing multiple holographic projections of a specimen from different angles and reconstructing them computationally, these systems provide detailed insight into the internal structure and dynamics of live cells without the need for fluorescent dyes or stains. Holotomography is especially valuable in biomedical research, drug discovery, and cell biology, offering real-time, non-invasive visualization of cellular morphology, dry mass distribution, and physiological changes with nanometer-scale precision.

United States market for Holotomography Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Holotomography Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
