There are two kinds of projectors for the home. One is the classic home theater projector. This is for people who want to spend the time and money to reproduce the dark viewing experience of a commercial movie theater in their home. And if you love the pure, super high quality film and video experience, nothing can beat it. Because home theater projectors are meant to be viewed in the dark, they are designed to give you absolute maximum black levels and contrast. Meanwhile, the picture quality is optimized with not too much brightness since an overly bright picture in a dark room will give you eyestrain and a headache before too long.

The other kind of projector is the home video projector. This is for folks who want the excitement of a very big screen picture in the living room or family room, but don't want to bother with making the room totally dark. You want a home video projector for video gaming, big screen TV for sports and other programming, Internet surfing, as well as for movies of course. Since most people want to watch in a room that is not darkened like a commercial theater, the home video projector is designed to put out a lot of light so the picture looks bright and vibrant even in ambient light. On the other hand, the home video projector does not go for maximum black levels and contrast since that doesn't do you any good in a room with ambient light anyway.

United States market for Home Cinema Projectors is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
