A home microdermabrasion system is a device that allows individuals to perform microdermabrasion treatments on their skin at home. Microdermabrasion is a cosmetic procedure that exfoliates and removes the outer layer of dead skin cells, revealing smoother and brighter skin underneath. Home microdermabrasion systems typically use a handheld device with a rotating tip or abrasive surface to gently exfoliate the skin. These systems are often less powerful than professional microdermabrasion machines used in dermatologist offices, but can still provide noticeable improvements in skin texture and appearance.

The global Home Microdermabrasion System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
