Home-use picosecond laser tattoo removal devices are designed for home environments and use picosecond ultra-short pulse laser technology to remove tattoos. Home-use picosecond laser tattoo removal devices use extremely short pulses (usually at the picosecond level, i.e. 10^{-12} seconds) of high-energy laser to act on the skin, using the principle of photoacoustic action to blast the dye particles in the tattoo. These tiny particles are then absorbed by the body's lymphatic system and excreted from the body, thereby achieving the effect of removing the tattoo. Home-use picosecond laser tattoo removal devices are designed to focus more on user experience and are usually equipped with a cooling system to reduce discomfort during treatment.
