Home solar equipment refers to a collection of technologies that harness solar energy to generate electricity for residential use. This equipment primarily consists of:

Solar Panels: These panels, typically made of photovoltaic (PV) cells, convert sunlight directly into direct current (DC) electricity.

Inverters: Inverters convert the DC power from the solar panels into alternating current (AC) power, compatible with household appliances and the electrical grid.

Mounting Systems: These systems securely attach solar panels to rooftops or ground-mounted structures.

Batteries (Optional): Batteries store excess solar energy for later use, particularly during periods of high energy demand or grid outages.

United States market for Home Solar Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
