Home V2G (Vehicle-to-Grid) charging station uses an inverter to convert the DC electricity stored in an electric vehicle battery into AC electricity, which can then be supplied to the grid or used to power household devices. Through IoT technology and dedicated applications (apps), users can monitor and control the battery's charging and discharging status in real time, set charging schedules, or define energy usage strategies. When integrated with home renewable energy systems, such as solar panels, excess energy can be stored in the EV battery, reducing reliance on traditional energy sources.
