Homewrap generally denotes a synthetic material used to protect buildings. Homewrap functions as a weather-resistant barrier, preventing rain from getting into the wall assembly while allowing water vapor to pass to the exterior. If moisture from either direction is allowed to build up within stud or cavity walls, mold and rot can set in and fiberglass or cellulose insulation will lose its R-value due to heat-conducting moisture. House wrap may also serve as an air barrier if it is sealed carefully at seams.

The global market for Homewrap is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Homewrap market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Homewrap market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Homewrap market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Homewrap market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
