According to our LPI (LP Information) latest study, the global Homomorphic Encryption market size was valued at US\$ 147 million in 2023. With growing demand in downstream market, the Homomorphic Encryption is forecast to a readjusted size of US\$ 533.9 million by 2030 with a CAGR of 20.2% during review period.

The research report highlights the growth potential of the global Homomorphic Encryption market. Homomorphic Encryption are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Homomorphic Encryption. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Homomorphic Encryption market.

Homomorphic Encryption (HE, homomorphic encryption) is a special encryption mode in cryptography. Homomorphic Encryption allows users to send the encrypted cipher text to any third party for calculation, and does not need to be decrypted before calculation. Calculate on the cipher text. Although the concept of homomorphic encryption first appeared 30 years ago, the first fully homomorphic encryption framework that supports arbitrary operations on cipher text appeared late, and was proposed by Craig Gentry in 2009.

Homomorphic Encryption is a form of encryption that allows an encrypted file to be calculated to generate an encrypted result that matches the result of the operation performed on the plaintext after decryption. The purpose of Homomorphic Encryption is

to allow calculations on encrypted data.

The Homomorphic Encryption is mainly classified into the following types: Partially Homomorphism and Fully Homomorphism. And Fully Homomorphism is the most widely used type which took up about 92% of the global in 2019.

Homomorphic Encryption is mainly used in Government, Financial & Insurance, Health Care, Industrial and Others. And Financial & Insurance is the most widely used area which took up about 30% of the global in 2019.

North America is the largest countries of Homomorphic Encryption in the world in the past few years and it will keep increasing in the next few years. North America market took up about 68% the global market in 2019, while Europe and Asia-Pacific were about 15%, 12%.

Market barriers of Homomorphic Encryption are high, the main players are Microsoft, IBM, Galois and CryptoExperts, Enveil, Duality Technologies, ShieldIO, HUAWEI among those, IBM mastered the most advanced technology, Microsoft made great progress in the healthcare and biotechnology area; Galois got strong support from DARPA; CryptoExperts, Enveil, Duality Technologies, ShieldIO, HUAWEI are young start-up companies with a huge future, and now, they are cooperating to standardize homomorphic encryption.
