The global Honey Food market size is predicted to grow from US\$ 7119 million in 2025 to US\$ 9141 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

Honey is a sweet food produced by bees foraging nectar from flowers. Honey bees convert nectar to honey through regurgitation and evaporation. The bees store the honey as a primary food source in wax honeycombs inside beehives. The beekeepers extract the honey by removing the honey comb and then by crushing it or using a honey extractor. Honey bees form an important part of the food chain as they aid in pollination, which is required to support the food chain.

The industry's leading producers are Capilano Honey, Comvita and Dabur, with revenue ratios of 2.34%, 2.08% and 1.46% in 2019, respectively.
