The global Honing Machine market size is predicted to grow from US\$ 342 million in 2025 to US\$ 430 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

In 2025, global honing machine production reached approximately 12,500 units. Honing machine, also known as cylinder boring and honing machine, is a special high-precision equipment for inner hole finishing. It mainly utilizes the relative reciprocating rotary motion between honing stones and the inner hole surface of workpieces to perform honing, polishing, rounding and deburring processing on various cylindrical inner holes such as cylinders, hydraulic cylinders, sleeves and precision pipe fittings. The machine adopts vertical or horizontal structures and is divided into ordinary mechanical type and CNC servo intelligent type. It can effectively correct the roundness, cylindricity and surface roughness of inner holes, and improve the dimensional accuracy of aperture and the finish of inner wall. Widely applied in industries including automobile engines, engineering machinery, hydraulic and pneumatic components, aerospace, precision molds, oil pumps and fuel injectors, it serves as an indispensable core finishing equipment in the manufacturing and repairing processes of precision inner holes.

United States market for Honing Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
