Abstracts

The global Hook and Loop Interface Cushion Pad market size is predicted to grow from US$ 249 million in 2025 to US$ 370 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2024, global annual sales of hook and loop interface cushion pads are expected to reach approximately 22 million pieces, with an average unit price of approximately $11 per piece. Hook and loop interface cushions are a type of intermediate cushioning material used between the sandpaper and the workpiece surface of a sander or polisher. Typically made from high-density polyurethane foam, EVA, or other elastomers, they offer flexibility and cushioning properties, improving the fit between the sandpaper and the workpiece surface, thereby reducing vibration during sanding, avoiding overcutting, and improving the processing quality of curved surfaces and corners. This product is widely used in industries such as automotive paint repair, woodworking and furniture manufacturing, ship maintenance, and electronic housing polishing, and is a key consumable for achieving high-quality surface treatment. The upstream market primarily relies on polyurethane raw materials, EVA resin, adhesive backing materials, and Velcro fabrics; the downstream market encompasses auto repair shops, woodworking and furniture manufacturers, ship repair companies, and professional sanding and polishing tool manufacturers, forming a complete industrial chain spanning "chemical raw materials - consumables processing - surface treatment industry." Rupes has an annual production capacity of 3 million pieces, focusing on the high-end polishing and car detailing markets; and Harbor Freight has an annual production capacity of 2 million pieces, primarily serving small and medium-sized repair shops and the DIY market in North America.
